

SALEEM RAMADAN, Ph.D., CAP, PMP, CSCP, PL-300

Operations Transformation & Analytics Consultant | Industrial Engineering, AI, Supply Chain & Healthcare Performance

Amman, Jordan | U.S. Citizen | linkedinsaleemramadan@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Industrial engineering professor and operations analytics professional with experience translating research, data, and optimization methods into practical performance-improvement solutions. Strong fit for professional-services advisory roles in operations transformation, data & analytics, supply chain, healthcare operations, manufacturing analytics, AI-enabled process improvement, and digital transformation. Combines Python, SQL, Power BI, Tableau, machine learning, operations research, Lean Six Sigma, and stakeholder-facing communication to diagnose operational problems, build decision-support tools, and deliver measurable improvement recommendations.

TARGET CONSULTING / ADVISORY ROLES

Operations Transformation Consultant / Manager | Data & Analytics Advisory Consultant | Supply Chain Analytics Consultant | Healthcare Operations Consultant | Manufacturing Analytics / Industry 4.0 Consultant | AI & Digital Transformation Consultant

CORE CONSULTING CAPABILITIES

Operations Transformation: process improvement, capacity, workflow, KPI design, Lean Six Sigma

Data & Analytics Advisory: dashboards, predictive analytics, executive insights, data storytelling

Healthcare Operations: OR efficiency, patient flow, radiology scheduling, IRB cycle-time reduction

Supply Chain & Logistics: planning, inventory, warehouse analytics, pallet loading, market-demand alignment

Manufacturing Analytics: DOE, ANOVA, RSM, quality monitoring, scheduling, 3D printing optimization

AI & Machine Learning: CNN, classification, regression, clustering, RUL prediction, pattern recognition

Operations Research: mathematical modeling, genetic algorithms, metaheuristics, simulation, NSGA-II

Implementation Leadership: curriculum/program design, stakeholder communication, mentoring, cross-functional projects

TECHNICAL TOOLKIT

Python | SQL | MySQL | SQL Server | R | Excel | Power Query | Power BI | Tableau | DAX | Minitab | MATLAB | LINGO | CPLEX | ProModel | TensorFlow | Scikit-learn | Pandas | NumPy | Lean Six Sigma | SPC | DOE | Value Stream Mapping

SELECTED CONSULTING & ANALYTICS CASE STUDIES

Healthcare operations / OR efficiency: Built a data-driven model for remaining intra-surgical time prediction to support operating room scheduling, resource utilization, patient flow, and real-time operational decisions.

Healthcare process improvement: Reduced Institutional Review Board review time from an average of 38 days to a maximum of 21 days using process mapping, statistical process control, and root-cause analysis.

Radiology operations redesign: Consolidated five pediatric radiology schedules into one unified system to improve appointment processing, reduce patient wait time, and lower phone-inquiry workload.

Manufacturing optimization: Optimized 3D printing parameters for lightweight, high-strength UAV parts using DOE, regression, ANOVA, response surface methodology, NSGA-II, and Minitab Response Optimizer.

Predictive maintenance and reliability: Developed applied research and analytics for remaining useful life prediction and food-production equipment monitoring to support reliability and downtime-reduction decisions.

Supply chain and warehouse optimization: Translated pallet loading, storage-time, and humidity research into warehouse and logistics decision-support use cases focused on space utilization and material-flow performance.

AI-enabled quality monitoring: Applied multimodal 2D-CNN control chart pattern recognition to classify Phase I process patterns and support early detection of abnormalities in quality-control systems.

Business intelligence portfolio: Built dashboard and analytics projects in Power BI, Tableau, Excel, SQL, and Python covering bank loans, NYC 311 service operations, COVID trends, HR analytics, retail performance, cryptocurrency monitoring, and hydroponic farm planning.

PROFESSIONAL EXPERIENCE

Professor / Former Acting Chair / Faculty Member, Industrial Engineering | Al Hussein Technical University | Amman, Jordan | 2023-Present

Lead teaching, applied research, and academic development across industrial engineering, data analytics, artificial intelligence, operations research, quality, and business process support.

Designed applied courses and projects integrating Python, SQL, Power BI, optimization, AI, and industrial engineering methods for business and engineering decision support.

Advanced applied research in machine learning, optimization, predictive maintenance, healthcare operations, manufacturing analytics, and decision intelligence with practical deployment potential.

Led or contributed to program development, assessment design, accreditation activities, and cross-functional stakeholder coordination.

Data Analyst / Consultant | HealthCare Operations & Performance Excellence (HOPE) | Ypsilanti, Michigan, USA | 2009-2013

Supported hospital process improvement projects using data analysis, KPI development, process mapping, workflow redesign, Six Sigma tools, and statistical process control.

Contributed to operating room efficiency, radiology scheduling, IRB review process improvement, and infection-prevention compliance initiatives.

Supply Chain Manager | Tasty Sub and Beef | Chicago, Illinois, USA | 1998-2009

Managed procurement, inventory, logistics, vendor coordination, cost control, and daily operational decisions in a service-based business environment.

Built practical operations and supply chain experience that complements later academic and consulting-oriented work in analytics and process improvement.

Academic Industrial Engineering Roles | Youngstown State University, German Jordanian University, Applied Science Private University | USA & Jordan | 2011-2022

Delivered industrial engineering instruction and applied research in operations research, quality, production systems, reliability, statistics, supply chain, and engineering analytics.

Served in program coordination, curriculum development, accreditation, and academic leadership roles, including MSc Engineering Management program development and curriculum committee leadership.

CERTIFICATIONS

Certified Analytics Professional (CAP) - INFORMS | Microsoft Certified: Power BI Data Analyst Associate (PL-300) | Project Management Professional (PMP) - PMI | Certified Supply Chain Professional (CSCP) - APICS/ASCM | Introduction to Generative AI for Data Analysis - Microsoft/Coursera | Prompt Engineering for ChatGPT - Vanderbilt/Coursera | Managing Big Data with MySQL - Duke/Coursera

EDUCATION

Ph.D., Systems Engineering - Ohio University, Ohio, USA | 2011

M.S., Management Information Systems - Keller Graduate School of Management, DeVry University, Illinois, USA | 2004

B.S., Computer Information Systems - DeVry University, Illinois, USA | 2002

B.S., Industrial Engineering - University of Jordan, Amman, Jordan | 1998

SELECTED RESEARCH & THOUGHT LEADERSHIP

Author of 30+ peer-reviewed publications in applied machine learning, operations research, healthcare analytics, manufacturing systems, reliability engineering, scheduling, quality control, and industrial engineering decision support.

Representative topics include operating-room predictive analytics, 3D printing optimization, remaining useful life prediction, AI-enabled control chart pattern recognition, production scheduling optimization, breast cancer detection, and warehouse pallet loading optimization.
